

Peter Christison & Associates Workplace Health Consultancy and training

Strategy 1

You could 'play host' to the training and charge other organisations a training fee. In this way you can not only subsidise the training but could even make a small profit!
We will know of other individuals interested in attending so we'd help with the marketing.

We invoice you for the standard training, you collect fees from other organisations making your profit in effect subsidising the costs for your delegates.

So all you need is the venue – power point projector & flip chart – provide lunch, people with joining instructions and we can do the rest!

See the PDF of a typical example of a training brochure of the host Third Sector advertising our course

Organisations like MCCH, Kent; 'Jobs in Mind, Camden; 'Bootstraps', Blackburn and 'Impact – Workability', Sussex are some of the organisations who have benefitted by this approach.

Strategy 2- Compact training groups

We'll gather together individual enquiries for specific training and when we have a viable number of enquiries, we'll secure a local venue and lay on the training. We can train groups of 3 – 6 people at competitive rates in our localities – Bristol & the Horsham/Brighton (West Sussex) areas. The training venues won't be deluxe but the training will, of course, be high quality!

Topics undertaken for these 2 strategies

Health and Safety:

Fire safety awareness
Fire marshall/warden's training
